Maria Luiza Guerra de Toledo

- IBGE, UN Regional Hub

UN Task Team on Scanner Data

Aim: enable and expand the practical usage of alternative data sources (including scanner) in consumer price statistics.

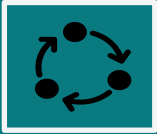

[Task Team homepage](#)

Course goals

Introduce the main concepts, challenges, and opportunities

Present methodological guidance and tools

Provide hands-on exposure to selected tools and workflows

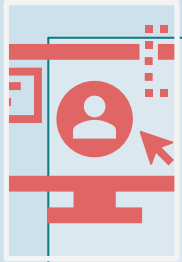

Facilitate peer exchange among NSOs

Support NSOs in identifying next steps for implementing or scaling alternative data sources

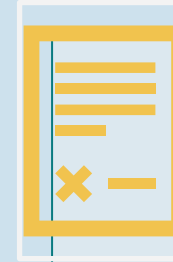

Course expectations

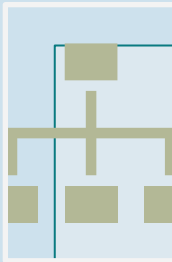

Most participants have some practical experience with alternative data sources, while production use remains limited

Web scraping and administrative data are more widely used than scanner data

Data access and agreements are the biggest challenge

Classification and product matching is the second largest challenge

Participants are seeking practical guidance, peer learning, and methods for integrating ADS into CPI production

Note these are based on the survey findings (9 NSO participants, 6 countries)
